Human Design
11:15am - Room 2

Human Design is a system that reveals your unique energetic makeup. It is based on your birth data and provides insight into your personality, strengths, weaknesses, and potential. As a personal development tool, it combines wonderfully with hypnotherapy to help clients release past conditioning and align with their authentic selves. We'll talk about how to employ this effective system in the clinic.

You'll learn how to read human design charts, understand the energies at play, learn which decision making strategies and language your client will best identify with, and how to identify potential areas where healing work is needed. This information is incredible for helping your clients achieve the transformations they desire.

It's also useful to understand for yourself, to leverage your own strengths and motivations in life and in business.

Virtual reality (VR) and hypnosis are being researched as potential tools for pain relief, healing, and mindset management in the future.

Using VR, individuals can enter immersive environments that can distract them from their pain, allowing them to relax and rehabiliy easier.

Hypnosis can also be used to change an individual's perception of stress, negative habits and health motivation, helping people to manage stress and anxiety.

At the Australian Hypnosis Conference (AHC), John and his brother Gelson will guide you through to experience VR and watch demonstrations of how it may be used for the future of pain relief, healing, and mindset management.
